

What's Your Home Worth?

Home buyers decide what your home is worth in today's competitive marketplace, perhaps more so than sellers and agents.

In essence, your home is worth what someone will pay for it. Location, size, style, condition, amenities, schools, parks, shopping, jobs and other factors influence the fair market value of your home. You may find that certain upgrades enhance your bottom line significantly, attracting higher demand for your home.

A comprehensive evaluation of your home's fair market value is crucial to making a well-informed decision to sell. A comparative market analysis (CMA) provides reliable and relevant information and data about your home's current market value.

Our Comparative Market Analysis Report (CMA) consists of four elements: a list of comparable properties; value adjustments for differences between your home and chosen comparable properties; a market analysis of comparable properties; and results displayed in an easy-to-read format. Additionally, our CMA provides useful information about current market trends in your neighborhood and surrounding areas.

To request a professional comparative market analysis (CMA) for your home, fill out the form below.
